

## ERASMUS+

The time has come and we finally had the chance to visit the breath-taking Estonia and met with our friends. The whole week was gone so swiftly but we had a wonderful time. We spent a lot of time together and also we have seen beautiful scenery. Estonia is famous for its natural beauty and while you are walking in streets you can always see trees and pretty parks. In the school we have plenty of group works with some different exchange students and also with the Estonians. Every morning we had a little warm up to

chat with the others and to tune up before the hard project work.

During school time we have heard some interesting presentations about the other countries from the exchange students from the belgiums,estonians and the germans. Also we have some invited experts about eco-organic farming and we visited some food charity places where we could ask our questions about the topic. Then we

had to make a food court where the students could try each others traditional foods. I was very happy when the students like our traditional langos and teli salami and I appreciated when I could taste the special foods from the countries. After school we had our free time to look better around the city and visit the ahaa museum and the upside down house which was funny and also we felt very dizzy from the moment we entered. On friday we went to a school dance show where we have seen the Estonians traditional dance which in my opinion was enthralling. And I almost forgot we

could try a new sport which is called petanque and I loved it.  
In the end of the week we were very sad that we have to leave but we look back with great pleasure and we can't wait to see the Estonians again.
